Corepoint Integration Engine Corepoint Health

THE COREPOINT INTEGRATION ENGINE OFFERS USERS ENHANCED FEATURES, such as roles, user profiles, and detailed graphic views. With specific user roles in place, IT departments are able to permit only designated users access to the interface environment based on organization's business rules and operating guidelines.

Graphic views also allow users to monitor queue depths, idle time, active alerts, and message status in realtime, taking needed actions with shorter response times.

"Corepoint Health delivered a robust, simple-to-use interfacing functionality at a reasonable price," says John Griffith, CIO, director of operations at Portland, Ore.-based EPIC Imaging.

"With Corepoint Health's healthcare integration solution, EPIC Imaging has strengthened its relationships with the referring physician community; furthermore, we have increased our business by doing more professional reads and increasing the number of direct referrals."

With the Corepoint Integration Engine, users can configure interfaces simply, build data logic quickly, and ensure high quality with a built-in test manager. Corepoint Integration Engine works productively with various data formats and standards, including all versions of HL-7, XML, HL-7 CDA and CCD, X12, DICOM, and delimited files.
